

Priva Operator

Manage your climate and operate your site remotely

Priva Operator is the online application that enables you to access your greenhouse data and settings from any smart device, in real-time. This gives you 24/7 insight into your cultivation and allows you to easily adjust settings and strategies on the go. Priva Operator is the most comprehensive cloud-based web application in the Priva Connected package.

Benefits of Priva Operator

User-friendly and customizable dashboard

The fully customizable dashboard offers you a clear overview of your systems, real-time settings and measurements.

Data-rich charts

Select and combine different measurements into one chart and gain new insights.

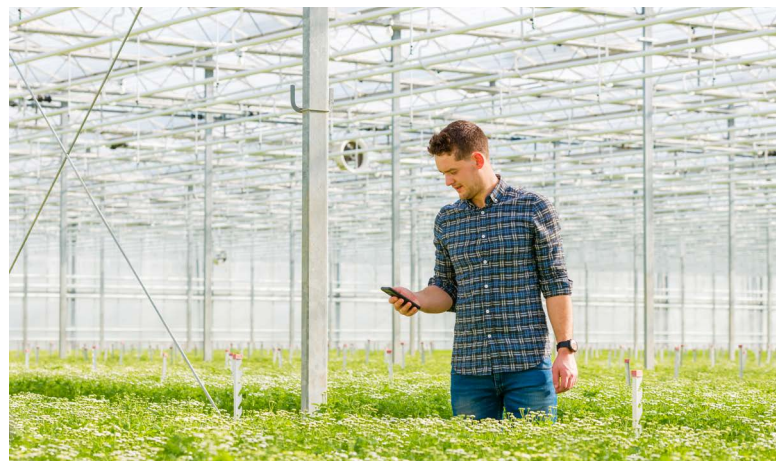

Quick and easy strategy adjustments

The keyword navigation and dashboard enable you to quickly adjust your strategy and settings.

Why use Priva Operator?

- **Accessible and easy to use:** Easily create your own dashboards and benefit from 24/7 insight into the most important processes in your greenhouse, such as climate, energy and water management.
- **Insight at a glance:** Decide what you want to see on your personal dashboards, so you can quickly navigate to the measurements and strategies that are most important to your business.
- **Remote crop control:** With Priva Operator, complete control of your crop, from any location and at any time, is now possible. You can also manage multiple sites from this single interface to streamline procedures.
- **Available in 14 languages:** Priva Operator is available in the language of your choice. Simply set the language under your user preferences.
- **Mobile-friendly:** The dashboard scales automatically to fit all types of mobile device, such as your smartphone or tablet.

Remote crop control

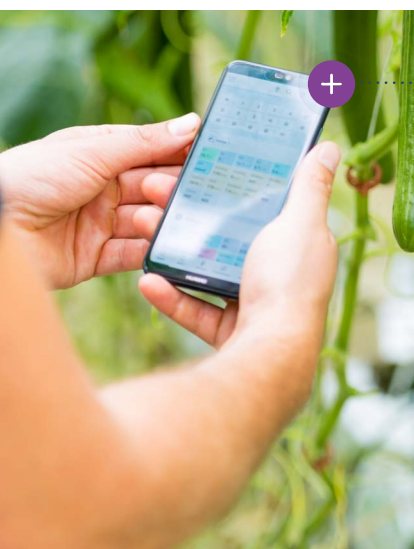

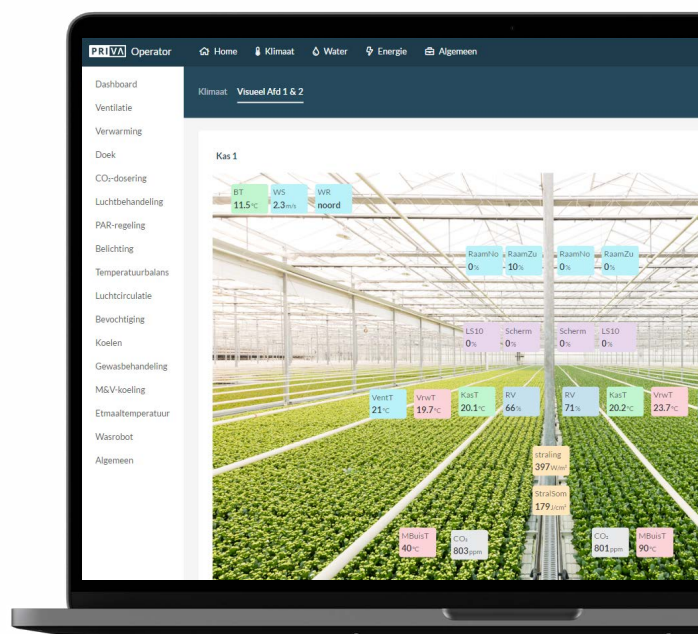

With Priva Operator, complete control of your crop, from any location and at any time, is now possible. Wherever you are, you'll be able to monitor your real-time greenhouse measurements and quickly adjust climate strategies as the need arises. You can also manage multiple sites from this single interface to streamline procedures.

Effective management of your crop just became an effortless task.

Clear custom dashboards

View, compare, analyze and take action – this can all be done from your dashboard interface.

With the fully customizable dashboard, you can change properties according to your preference. Decide which information you want to see so you can quickly navigate to the measurements and strategies most important to your operation. Create separate dashboards for different greenhouse processes, like climate, water or energy, separate compartments or one for each employee - making sure you are always viewing relevant data.

Get Connected

To get started with Priva Operator, you will need Priva Connected: the service package with essential services to control your greenhouse remotely. A Priva Connected subscription includes several applications such as Priva Operator, Priva Notification Center and services like the Priva Helpdesk and the Priva Academy.

To ensure that you always have a future-proof solution with the latest software, you will receive continuous software updates automatically for online applications. Also the Connex software update is part of the Priva Connected service package, which should be installed by your Priva partner.
